agripp

Philippe Ceulemans is a passionate rock climber born in a family of artists from Brussels.

He himself is a sculptor - the fourth generation !

Philippe has been around the world for climbing and is a routesetter and traveling to many spots. He combined his climbing experience with his artistic gifts by creating top of the range climbing holds in highly crafted designs.

Agripp, Philippe's new company, presents three complete ranges of holds with unique technical and aesthetic characteristics.

We're stoked to announce the latest release from Agripp: the competition & bouldering orientated Dune range. A radical departure from Agripp trademark precision style, Dune embraces the current trend dominating competition climbing for simple, clean shapes that facilitate dynamic and compression movement.

Modern indoor bouldering is evolving and the use of larger, cleaner holds à la Dune is shifting the setting style away from brute strength orientated moves towards problems that place a greater reliance on technique and co-ordination, in addition to encouraging experimentation with movement.

With Dune, the frustration of not being strong enough is no longer always the barrier to success - we reckon it's hard to argue against the more engaging and playful experience that this climbing hold style offers the contemporary climber.

Each line offers a wide variety of shapes making it easy to create entirely new routes.

PE - Polyester CRISTOBALITE

We chose cristobalite resin for the manufacture of our climbing holds. A precise mix of quartz powder for the resin mortar. A touch close to the rock with unique grip sensations thanks to its hardness. PE resin is cheaper. On the other hand, it is much more stable in U.V.

PU - Polyuréthane DANNOMOND

Characteristics like higher wear resistance, bright colours, dry soft texture and superior strength make it the first choice material for Climbing holds. Route setters and gym owners alike appreciate the long life and ease of route setting it imparts in the holds.

Texture

We have changed our texture for the DUNE range (Competition Line). Finer and softer so that your fingers get a grip that meets your expectations.

Insert

Insert INOX - UBI (Universal Bolt Insert) increases the resistance capacities up to 300%. Agripp holds are therefore much more resistant. This system is integrated into all Agripp holds.

Maintenance

When the holds are screwed to a wall and used regularly, it is common for magnesia and rubber slippers to soil them. In the long run, this can affect the quality of grain adhesion. We advise our customers to clean the outlets before reuse and check their condition after a long period of use.

Ecological Holds

At Agripp we are very concerned about global warming and climate change. We believe our composite outlet manufacturing technique contributes to the common effort of minimizing the use of fossil natural resources and minimizing emissions, using 5 times less raw material and producing the climbing holds that have the longest life in the market.
