About.

Born out of our passion for climbing on the world-class mountains, cliffs and boulders of North Wales, Beacon is located near Llanberis within the heart of the Welsh climbing scene and has been producing climbing holds and operating Beacon Climbing Centre since 1994.

Our 20+ years of accumulated experience and knowledge as both end user and manufacturer, allows us to exactly understand the process behind shaping and manufacturing premium climbing holds. This is what we produce.

Beacon climbing holds are designed and manufactured to the highest possible standard using the highest quality materials and are tried and tested on climbing walls throughout Europe.

Features.

Dual attachment system.

All our bolt-on climbing holds feature a dual bolt washer that allows either M10 countersunk or cap head bolts to be used to mount the holds. This metal insert creates a more even stress distribution within the hold - thus increasing the force required to break the hold through the bolt.

Secondary fixing point.

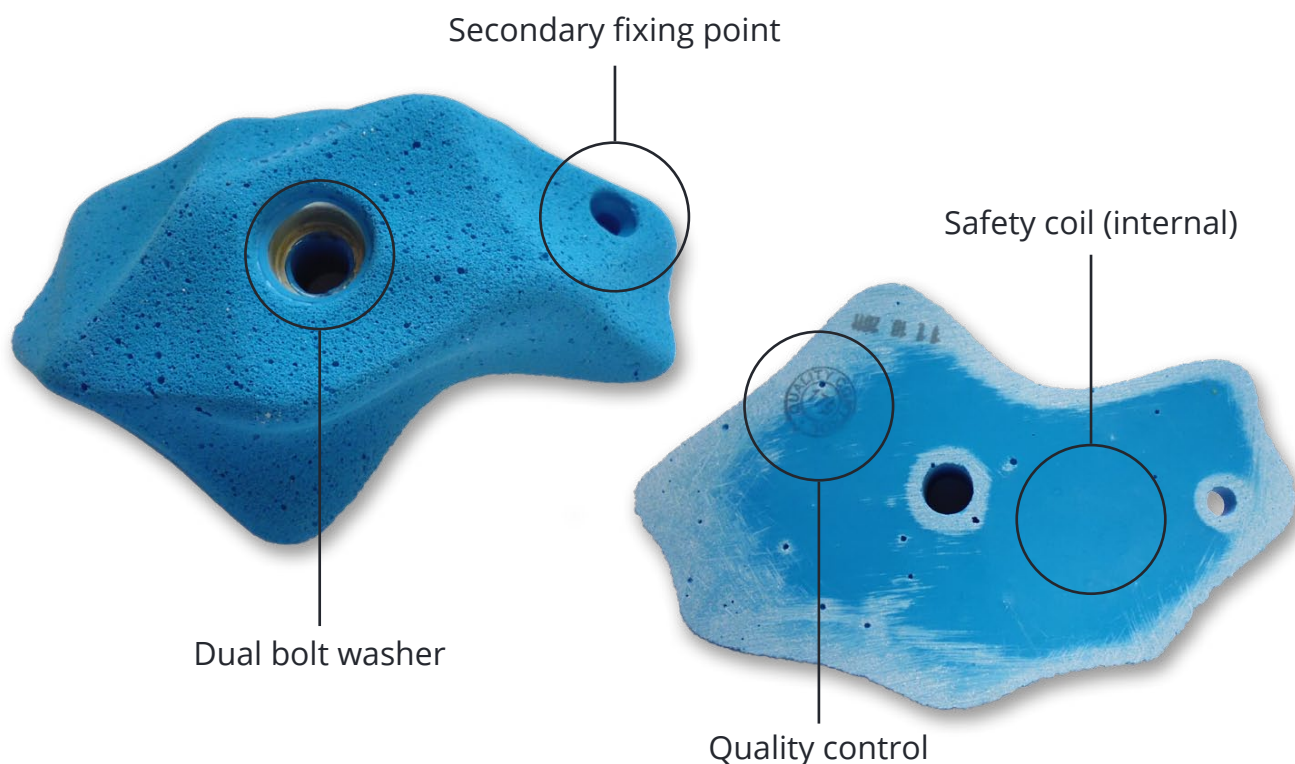

Spinning climbing holds are a cause of unexpected falls on climbing walls. All our climbing holds feature a secondary fixing point in addition to the main bolt hole. This smaller fixing point accepts a regular 5mm diameter wood screw and prevents the climbing hold from spinning in use.

Safety coil.

All our climbing holds from size small and larger are fitted with a safety coil manufactured into the hold. In the unlikely event that a climbing hold should break in use (our reported breakage rate is < 0.01%) the safety coil binds the broken pieces and prevents large parts of the hold falling to the ground.

Quality control.

Each climbing hold is individually inspected and stamped with a traceable quality control stamp on the base of the hold along with the date of manufacture. Samples from batches of holds are regularly tested to failure in order to ensure that our stringent manufacturing standards are consistently maintained.

Materials.

PE - Polyester Moulding.

Most Beacon climbing holds are manufactured using polyester (PE) resin. This is the benchmark material for climbing holds supplied to the EU market. Our advanced CX200 compound combines the best combination of surface texture feel, surface wear resistance and colour resilience with low manufacturing costs.

PU - Polyurethane Moulding.

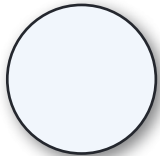

Our largest climbing holds are moulded using the latest Dannomond polyurethane (PU) compound, with a lightweight hollow-back design. Not only is this PU compound significantly lighter than PE, making route setting with larger holds easier, it is also stronger and more durable making it less prone to chipping and breaking.

Additionally, we use a solid Dannomond PU compound for our smallest XS holds. This material choice significantly reduces the risk of cracking that can occur due to over-tightening of low profile XS climbing holds.

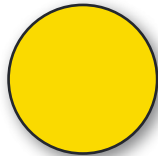

Colours.

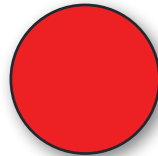

All Beacon climbing holds are available in a choice of 9 different colours. We manufacture on a per order basis, meaning that there are never any limitations on stock availability or colour choice.

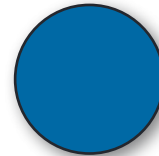

Traffic White (1)

Bright Yellow (2)

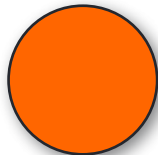

Traffic Red (5)

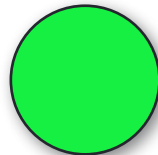

Sky Blue (7)

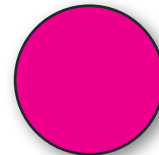

Jet Black (10)

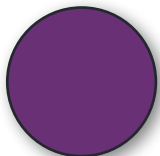

Fluoro Orange (11)

Fluoro Green (12)

Fluoro Pink (13)

Signal Violet (16)

Please note. The colour swatches shown are digital representations of actual colours and variations will exist between these and actual material colours. Due to material differences, some colour variation will also exist between polyester and polyurethane holds moulded using the same colour code.

Crimps.

Small but positive holds that engage the finger tips. Use them on vertical climbing walls or arêtes to create interesting, technical climbs, as positive foot holds on any climbing wall, or on steeper terrain to train finger strength.

Flatties.

Large, flat climbing holds that require an imaginative approach in order to work out how best to hold on. These versatile holds can be used as hand holds or foot holds - they're great for heel hooking - on all types of climbing walls.

Jugs.

The easiest type of holds to grip, jugs are very positive and can be used to create easier climbs for younger climbers, novices or warming up, or for creating accessible climbs on steeper angles.

Beacon Climbing Holds

Novelty.

Introducing a playful element into our range, these beautifully sculptured novelty shapes are perfect for engaging younger climbers and for reminding the older generations that climbing should always be fun too!

Beacon Notes:
All these Novelty Holds are suitable for use on children's play areas. The designs are easy for little hands to grip and importantly all feature a non-hooking design to prevent catching clothing.

Pinches.

Technical holds named after the need to engage your thumbs in order to hold on. Pinches are really versatile climbing holds that can double up as slopers, flatties or even small jugs depending on their mounting orientation.

Beacon notes:

Our Tufas are manufactured using hollow-back technology and are great fun to climb on. Nothing captures the attention of our climbing centre users like a tufa line running up our lead walls!

Pockets.

Holds that contain holes! Pockets include deep slots that can be held with both hands, small holds that accept just one or two fingers for the super strong and shallow technical dimples that require accuracy and precision to hold.

Beacon notes:

Our route setters love using Pops around corners and on volumes to create compression moves and technical heel locks. Our Axe Heads set is very similar - just smaller.

20 Slopers.

Beacon Climbing Holds

Smears.

Very small holds that are primarily used for foot placements but also make useful hand holds for creating technical climbs on arêtes and in grooves. Our smaller sets are screw mounted meaning placement is not limited by bolt hole location.

System.

System boards are training walls equipped with matching pairs of holds to allow left and right side muscle balance to be achieved. Our system sets use CNC technology to create each climbing hold shape in a left and right handed version i.e. they are exactly mirrored.
